Google Dorking
Cheat Sheet

Created By: Conall Woolcott

What is Google Dorking?

Google Dorking, also known as Google hacking, uses advanced search operators to find information that is not readily visible or accessible through a simple search. These commands can be very powerful for finding specific types of information on the web.

Basic Operators

site - Search within a specific website.
- site:example.com

inurl - Search for URLs containing a specific string.
- inurl:admin

intitle - Search for pages with a specific word in the title.
- intitle:"login"

intext - Search for pages containing a specific word in the text.
- intext:"password"

filetype - Search for specific file types.
- filetype:pdf

Combining Operators

AND - Combine multiple search terms
- login AND admin

OR - Search for either one term or another.
- login OR admin

- - Exclude a term.
- admin -login

Advanced Operators

cache - Show the cached version of a webpage.
- cache:example.com

link - Find pages that link to a specific URL.
- link:example.com

related - Find sites related to a specific site.
- related:example.com

define - Define a word or phrase.
- define:hacking

Practical Use Cases

Discovering Open Webcams
- inurl:view/view.shtml

Finding Vulnerable Servers
- inurl:/proc/self/cwd

Finding Specific Document Types
- filetype:doc site:example.com

Locating PHP Info Pages
- inurl:phpinfo.php
