

Cyber Teams

Red, Blue, and Purple

Created By: Conall Woolcott

RED TEAM

A specialized team within cybersecurity that simulate real-world attacks to assess and enhance an organization's security posture.

Primary Focus

The activities range from penetration testing to social engineering, all aimed at finding weaknesses that could be exploited by hackers. After conducting simulated attacks, red teams provide detailed reports and actionable recommendations, helping organizations strengthen their defenses and improve incident response capabilities.

BLUE TEAM

Assists in an organization's cybersecurity defense strategy, tasked with protecting systems, networks, and data from potential threats and cyber attacks

Primary Focus

This team's primary focus is detecting, responding to, and mitigating security incidents through active monitoring, threat intelligence, and the implementation of security measures. Blue teams continuously analyze security logs, manage firewalls, and conduct vulnerability assessments. Aiming to identify a risk before the exploitation. Additionally develop incident response plans and conduct regular training to ensure readiness against potential attacks.

Purple Team

A combination of red and blue teams taking critical skills from both sides to overall enhance a organization's cybersecurity posture.

Primary Focus

The team's focus is on integrating insights from red team activities into blue team practices, ensuring that both offensive and defensive strategies are aligned and that lessons learned are effectively applied to strengthen overall security.
