

# ROOT CAUSE ANALYSIS

## WHAT IS RCA?

Root Cause Analysis (RCA) is a process used to identify the underlying reasons for a problem or failure. The goal is to find the root cause, rather than just addressing the symptoms. That way an effective solutions can be implemented to prevent further recurrence.

---

## KEY STEPS

### Define the Problem:

- Clearly articulate what the issue is and its impact.

### Collect Data:

- Gather relevant information, including evidence, to understand the problem context.

### Identify Possible Causes:

- Utilize techniques like brainstorming or system reviews to identify and analyze potential causes.

### Analyze Causes:

- Determine which causes are most likely to be the root cause by evaluating their impact and relationships.

### Implement Solutions:

- Develop and apply strategies to address the root cause.

### Monitor and Review:

- After implementation, monitor outcomes to ensure the problem is resolved and assess the effectiveness of the solutions.
